**TALK-BACK SYSTEM** | DESIGNED TO YOUR NEEDS

# TALK-BACK SYSTEM DESIGNED TO YOUR NEEDS

- **DESIGNED TO LAST**
- **EASY MAINTENANCE**
- **ROBUST & RELIABLE**

## ■ **MAKE YOUR COMMUNICATION RELIABLE**

### **Designed to your needs**

The Commander 1500 system is a single channel “2-way” communication system.

The system is configured as a centralised system and consists of a central unit with or without a built-in main station, external main stations and sub stations.

The systems can be specially designed to your needs. The standard system comes with 5-40 substations, but can be expanded up to 60 substations.

### **Easy communication**

The system works as simplex operation with a compulsory talking control from the main station. Main stations can communicate with each other and one or more substations can be called simultaneous.

All stations are available in various models, which are adapted to maritime environments indoor and outdoor.

The stations are easy to operate with a simple calling key and a combined Loudspeaker / Microphone unit.

### **Reliable and easy maintenance**

By keeping the stations simple and robust with proven components, you are ensured a reliable and easy-to-maintain system.

With over 60 years of experience and deliveries all over the world, Amplidan will help you choose a system that matches your needs.
